

Within the scope of our energy management approach, we establish quantified and measurable energy performance targets to drive continuous improvement and enhance operational efficiency. These targets are defined based on our historical performance, operational requirements, and energy intensity indicators, and are aligned with our broader sustainability and decarbonization objectives. We regularly monitor our progress against these targets, analyze deviations, and implement corrective actions where necessary. The following section provides our disclosed energy consumption data alongside our quantified targets, with the target for 2025 set at 7.991.302 MWh/year.

Petkim tracks its energy consumption:

| Energy Consumption | Unit | 2022* | 2023* | 2024* | 2025 |
|--|-------------|--------------|--------------|--------------|-------------|
| Total non-renewable energy consumption | MWh | 7.905.339 | 8.142.910 | 7.453.481 | 7.649.655 |
| Total renewable energy consumption | MWh | 0 | 0 | 0 | 0 |
| Coverage | 100% | 100% | 100% | 100% | |

*Energy consumption data for the period between 2022 and 2024, expressed in MWh, is publicly disclosed in both our SOCAR Türkiye (pg.170) and Petkim Integrated Annual Report (pg.204).
